DETAILED ACTION

1. Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no disclosure as to how the height and distance between the elevations are measured and how the elevations and depressions are made in the paper. For example the elevations and depressions could be measured by SEM, optical and physical means such as by a stylus; each method having differing degree of accuracy, which would potentially yield differing numerical values for the identical substrate. In any case there is no disclosure in the description of the invention in the specification of any method or technique. The simple addition of the particles does not appear to account for the dimension and spatial relationship of the elevations and depressions.

2. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not known how the height of the elevations and distance between elevations are measured and therefore the scope of the claims cannot be ascertained.
